Wireless Networks

## Challenges of Managing Wireless Networks for Security, Performance and Compliance

Survey: WiFi security remains a problem in Hong Kong

While 84 percent of WiFi access points in Hong Kong are encryption enabled, only 6 percent of them are encrypted with today's most secure technology WPA or WPA 2 AES, said Hong Kong Wireless Technology Industry Association (WTIA) lately when releasing its 2009 War Driving Surveys results.

*Quoted by Computerworld HK, 31 March 2010*

The wireless network has earned a status of “essential” in many enterprises, but it also exposes organizations to a new breed of threats and operational problems that are different from wired networks. **AirMagnet** provides the only comprehensive solution for managing all risks associated with wireless networks so business applications are secure, reliable and compliant.

**SECURITY** – 24 x 7 intrusion detection and prevention & track all devices, channels and traffic

**PERFORMANCE** – Proactive identify wireless problems

**COMPLIANCE** – Automatically report for compliance with PCI DSS, HIPAA and more
